

PROMPT:

search for articles (state of art) including (or neighbouring) the following topics:

- identifying biased / malicious discourse
- analyzing ai-made (or not) scripts with manipulative keywords
- malicious / disruptive / sick electoral campaign
- manipulative publicitary campaign
- explainability on great manipulable speeches (leaders, presidents, generals, ...)

Spotting Persuasion: A Low-cost Model for Persuasion Detection in Political Ads on Social Media

<https://arxiv.org/pdf/2503.13844v1>

How stupid and petty things have become in Washington.	Loaded Language Using specific words and phrases with strong emotional implications (either positive or negative) to influence an audience.
Bush the Lesser.	Name Calling Labeling the object of the propaganda campaign as either something the target audience fears, hates, finds undesirable or loves.
A nation deflects criticism of its recent human rights violations by citing U.S. slavery history	Whataboutism Discredit an opponent's position by charging them with hypocrisy without directly disproving their argument.
We must stop those refugees as they are terrorists.	Appeal to fear/prejudice Seeking to build support for an idea by instilling anxiety and/or panic in the population towards an alternative.

Figure 1: Examples of Persuasion techniques from the SemEval dataset with explanation of the technique.

- SemEval-23 Task 3 dataset

- **Data Preparation.** We translated all non-English training documents into English using the Google API machine translation model to standardize the data for uniform model training.

Towards a LLM-based intelligent system for detecting propaganda within textual content

<https://www.sciencedirect.com/science/article/pii/S0045790625007086>

6

Fig. 1. Overview of the LLM-based intelligent system.

Table 1

Comparison of F1-scores between our approach and related works.

Method	F1-score
BERT + LR + additional features [9]	0.540
BERT + Feature modeling techniques [10]	0.573
BERT + Text pre-processing [11]	0.553
BERT + GloVe [12]	0.505
LLM with Prompt [17] (Baseline)	0.647 (GPT-4o)
Our Work (CoT)	0.774 (GPT-4o)

Detecting Propaganda Techniques in Code-Switched Social Media Text
<https://aclanthology.org/2023.emnlp-main.1044.pdf>

Figure 1: Example of code-switched text annotated at the fragment level. Here, the entire text is labeled as *Smears* and *Black and White Fallacy/Dictatorship* **Translation of the text:** *There are only two types of fans. Those toxic people who till death will not leave this rubbish team's side and people like me who realize this team is dung.*
